PROFESSIONAL SUMMARY

With 12+ years of multifaceted experience across Software Engineering, Full Stack Development, Game Development, Technical Architecture, Product Leadership, and Engineering Leadership, I have delivered impact across startups, enterprise companies, consulting environments, iGaming, game publishing, and Web3-native platforms. My work spans full lifecycle engineering, including 0 to 1 product development, brownfield and greenfield migrations, enterprise platform architecture, cross-functional leadership, and scaling products used by global audiences.

I thrive in collaborative environments where innovation, performance, and product excellence intersect.

Core Strengths & Contributions

- Currently lead software architecture across a 90+ person delivery organization at Conrad Electronic Group, aligning engineers, QA, product owners, designers, content teams, and stakeholders around scalable enterprise platform decisions.
- Provided architecture direction and key technical decision-making across 7 squads / 30+ engineers at Chiliz, supporting implementation standards, delivery alignment, and core platform architecture.
- Delivered brownfield migrations, greenfield systems, enterprise modernization initiatives, and 0 to 1 products across consulting, startup, enterprise, gaming, iGaming, and Web3 environments.
- Architected complex full stack systems for mobile apps, decentralized platforms, high-traffic sites, enterprise platforms, and immersive game UIs.
- Owned product and engineering vision as Founder, CTO, Architect, Tech Lead, and Senior Engineer, contributing to roadmap planning, product decisions, technical tradeoffs, monetization strategy, and delivery execution.
- Operated beyond formal job titles in multiple roles, taking ownership of architecture, technical strategy, key engineering decisions, team coordination, stakeholder alignment, and delivery quality.
- Delivered performance-critical solutions using native modules, C/C++, Java/Kotlin, Swift, WebGL, PixiJS, and performance-focused frontend/backend optimization.
- Implemented DevOps, CI/CD, observability, testing, and release practices to improve delivery speed, reliability, and maintainability.
- Strong focus on communication and clarity, particularly in remote and asynchronous environments, ensuring alignment across engineering, product, and leadership.

Core Tech Stack

Frontend: React, Next.js (App Router & SSR), React Native, Vue.js, Nuxt 4, PixiJS, Angular, Redux, RxJS, Tailwind, Svelte/Svelte Kit, design systems, micro frontends
Backend: Node.js (NestJS, Express), PHP (Laravel, Vanilla), C#, C/C++, Java/Kotlin,

Mobile App Development (React Native, Flutter, Ionic, NativeScript, Java & Kotlin, Swift)

Smart Contracts (Sol, Solidity, Polkadot with Parachains)

HTML5 & CSS3

Tailwind

State Management (Redux / Zustand / Recoil)

PHP (Vanilla, Symfony, Laravel)

SQL & NoSQL (MongoDB, MariaDB, TSQL, Oracle SQL)

Blockchain Providers (The Graph Protocol, Alchemy)

Blockchain

Leading / Engineering Manager

Linux / iOS / Windows

Software Architecture (Frontend, Backend)

Figma

WebSocket (Socket.io / SignalR)

REST API, GraphQL

WebGL (PixiJS, Three.js, Native)

EVM / Non-EVM

React Query, SWR

AI (ChatGPT APIs, TensorFlow)

Electron

C/C++

Python

Git

Docker

Rust

Rx Library

Cloudflare (Inc Cloudflare Workers)

C# & ASP.NET

gRPC

Python, Rust (Substrate), microservices, WebSockets, REST, GraphQL

Web3: Solidity, Ethers.js, Wagmi, Web3.js, WalletConnect, MetaMask, The Graph (SubGraphs), Alchemy, Infura

Data & Infra: PostgreSQL, SQL / NoSQL, Redis, GraphQL, REST, DigitalOcean, Vercel, AWS, Cloudflare, Docker, CI/CD pipelines, observability, caching, edge delivery

Game & UI/UX: NativeScript, Flutter, PIXI.js, HTML5 Canvas, Figma, Adobe XD, Illustrator, Maya

CMS & Enterprise: Adobe Experience Manager (AEM), Strapi, headless CMS strategy, SSR / SSG, SEO, accessibility, redirects, sitemaps, multi-site and multi-locale architecture

Other: Jest, Playwright, Storybook, TDD, Microservices, WebSockets, Electron, Stripe, PayPal, Claude Code Max CLI, Gemini Enterprise, LLM productivity tooling

EMPLOYMENT HISTORY

Lead Software Architect / Enterprise Architect, Remote
Conrad Electronic Group

Nov 2025 — Present

Lead software architecture, migration strategy, and delivery for enterprise digital experience platforms built around Adobe Experience Manager (AEM), modern frontend stacks, and future CMS modernization. Focused on scalability, maintainability, performance, multi-site delivery, SEO, accessibility, and team enablement.

Key Contributions:

- Design component-driven frontend architecture for multi-site and multi-locale experiences, ensuring consistency across brands, regions, and product teams.
- Lead technical strategy across AEM, Nuxt.js, Vue.js, and related frontend ecosystems, balancing headless, hybrid, SSR, SSG, and client-side rendering approaches based on business and performance needs.
- Build and govern reusable UI libraries and design-system patterns to improve delivery speed, reduce duplication, and keep experiences aligned across teams.
- Define best practices for accessibility, performance, SEO, and long-term maintainability across enterprise-facing web properties.
- Partner with backend, DevOps, and product stakeholders to shape CI/CD pipelines, deployment standards, API integration patterns, and release workflows.
- Improve delivery quality through code reviews, architectural decision-making, documentation, and guidance for scalable engineering practices.
- Work on caching and edge-delivery strategies, including ESI-style approaches where appropriate, to support faster load times and personalized experiences without sacrificing stability.
- Mentor engineers and provide technical direction across multiple teams, helping align implementation details with wider platform goals.
- Collaborate closely with marketing and engineering stakeholders to bridge content management needs with frontend delivery requirements.
- Lead the software architecture across a 90+ person delivery organization, helping align frontend engineers, backend engineers, QA, product owners, designers, content teams, and stakeholders around scalable enterprise platform decisions.
- Lead migration planning and implementation direction for modernizing AEM-driven experiences into scalable frontend and CMS architecture.
- Define migration strategy for components, templates, content structures, redirects, sitemaps, SEO requirements, accessibility, and multi-market rollout considerations.
- Own key architectural decisions around AEM integration, Nuxt / Vue architecture, rendering strategy, component structure, caching, edge delivery, redirects, sitemaps, and long-term maintainability.

LANGUAGES

Maltese

English

Italian

- Work across business, product, engineering, marketing, content, and DevOps stakeholders to clarify migration scope, technical risks, platform dependencies, and delivery priorities.
- Provide architecture governance, implementation guidance, and delivery alignment across multiple teams to support maintainable, scalable, and consistent digital experiences.

Industries:

E-Commerce

Tech Stack:

AEM, Nuxt.js, Vue.js, Svelte/Svelte Kit, JavaScript, SSR, SSG, CI/CD, design systems, frontend architecture, accessibility, SEO, caching, APIs

Senior Full Stack Engineer, HyperPlay

Remote

Oct 2023 — Nov 2025

HyperPlay is the world's first Web3 game launcher, pioneering the way decentralized games are discovered, played, and integrated with crypto ecosystems.

Scope included: Product Architecture, Web3 Platform Delivery, Electron, Mobile, and Developer Experience

Key Contributions:

- Built scalable architectures for both the web platform and Electron based desktop app, ensuring maintainability and high performance.
- Introduced and architected the mobile app using React Native, enabling a consistent cross platform user experience.
- Implemented and optimized scalable features across the main website, game store, developer portal, and launcher client.
- Maximized performance using Lighthouse audits and native C/C++ modules, particularly for mobile and desktop builds.
- Contributed to product innovation, shaping new directions and collaborating with stakeholders to drive core feature growth.
- Led and participated in code reviews across a multistack environment to uphold quality and maintainability.
- Conducted smart contract security audits, identifying potential vector attacks and improving overall Web3 security posture.
- Wrote high coverage automated tests across stacks (backend, frontend, mobile, desktop), ensuring regression safety and reliability.
- Built components using an internal design system, complete with Storybook documentation and interaction testing.
- Delivered 0 to 1 product initiatives, building new marketing facing and core platform features from scratch.
- Actively contributed across multiple languages and frameworks, including Node.js, Rust, and Solidity.
- Worked with Web3 integrations, managing wallet connections and blockchain interactions across EVM compatible chains
- Established DX (Developer Experience) improvements, including CLI tools, scaffolders, and internal documentation.
- Led performance profiling and optimization for Electron and mobile environments, reducing memory usage and load times.
- Collaborated with community developers, integrating their feedback into the roadmap and open source contributions.
- Contributed to product architecture and key technical decisions across the web platform, developer portal, Electron launcher, and mobile direction.

- Supported migration and modernization work across frontend, desktop, backend, and Web3 systems, improving maintainability and long-term scalability.
- Worked closely with product and engineering stakeholders to turn early product ideas into technical plans, architecture decisions, and production-ready features.

Industries:

Web3, Game Publishing

Tech Stack:

Next.js (App Router, SSR), PostgreSQL, GraphQL, React.js, Node.js, Electron, Rust, Solidity, C/C++, React Native, SASS, AWS, Microservices, Vercel Enterprise

Senior Frontend Engineer, reNFT

Remote

Jan 2023 — Aug 2023

One of the most innovative companies in the NFT space, 021 (formerly reNFT), offers a lending protocol for NFTs with direct integrations in the gaming industry, including well known titles like *Castle Crush*. Please note that older articles may reference the company under its former name, reNFT.

Scope included: Frontend Architecture, Product Collaboration, Web3 Marketplace, and Technical Decisions

Key Contributions:

- Developed NFT Marketplace V2 in close collaboration with the Tech Lead, ensuring a scalable, modular architecture.
- Architected and implemented performance optimized solutions, achieving high Lighthouse scores and following best practices for frontend performance.
- Built reusable UI components using Radix UI, collaborating effectively with the Design team to maintain consistent design language.
- Maintained a comprehensive Storybook with interaction tests to ensure UI components remain robust and well documented.
- Contributed to architectural and stack level decisions across both backend and frontend technologies.
- Implemented scalable new features on both the landing page and marketplace, adapting to evolving product priorities.
- Wrote end to end Playwright tests with high test coverage, ensuring critical workflows remained bug free across releases.
- Handled iterative improvements and issue fixes, helping prioritize tasks based on user and business impact.
- Delivered the V2 reNFT landing page, which laid the foundation before the rebranding to 021. This was done under the supervision of the Tech Lead, while I owned the implementation and delivery from 0 to 1.
- Refactored major parts of the codebase, simplifying complex logic and improving maintainability.
- Introduced frontend interactions using Wagmi and Ethers to communicate with smart contracts.
- Contributed beyond frontend implementation, supporting product-related issues, software architecture, systems thinking, technical decisions, and team alignment.
- Worked closely with technical leadership to build consensus around frontend architecture, product decisions, and implementation direction.
- Supported the transition from earlier product architecture into a more scalable

V2 marketplace and landing page foundation, contributing to modernization, performance, testing, and maintainability.

Industries:

Web3, Game Publishing

Tech Stack:

React, Next.js (SSR), Radix UI, Wagmi, Svelte/Svelte Kit, GraphQL, Alchemy, The Graph Protocol, Azrael, Sylvester, Solana, Solidity

Chief Technology Officer, CoinOn

Remote

Nov 2021 — Jan 2022

CoinOn was a Web3-native platform focused on influencers, game publishers, immersive crypto experiences, gamified engagement, and blockchain integrations. As CTO, I owned the technical roadmap, product architecture, team direction, and 0 to 1 delivery across web, mobile, backend, blockchain, and infrastructure.

Key Responsibilities & Contributions:

- Defined and executed the technology roadmap, aligning engineering goals with the company's long term vision and product milestones.
- Led the architecture from 0 to 1, building the entire stack from the ground up with scalability, security, and performance at its core.
- Managed and coordinated a cross-functional team of 10+ people across engineering, product, design, blockchain, and delivery, focusing on execution, mentorship, technical quality, and product outcomes.
- Oversaw IT infrastructure and operations, ensuring high availability, data integrity, and efficient resource utilization.
- Conducted deep technical R&D to guide product innovation, platform capabilities, and blockchain integrations.
- Led initiatives on cybersecurity and smart contract safety, focusing on blockchain specific threat vectors and prevention strategies.
- Established analytics pipelines, internal KPIs, and budgeting tools to drive data informed decisions and product iteration.
- Directed compliance research and implementation, working on technical alignment with evolving crypto regulatory frameworks.
- Built disaster recovery and business continuity plans, essential for operational resilience in blockchain based environments.
- Handled intellectual property (IP) strategy, protecting product innovation and core technology.
- Acted as a key technical voice across the executive team, collaborating directly with the CEO, CPO, CSO, and CDO to align on product, strategy, and growth.
- Deployed secure CI/CD pipelines with audit logs, permission controls, and rollback strategies.
- Introduced microservice architecture with distributed backend services for modular and scalable feature development.
- Championed immersive UX, leveraging PixiJS for game like frontends to engage Web3 native users.
- Developed SDKs and APIs for 3rd party integrations and partner ecosystems.
- Enabled cross chain interoperability using custom bridges and indexers across Solana, Polkadot, and EVM compatible chains.
- Drove strategic partnerships, using technical insights to attract collaborators and investors aligned with CoinOn's vision.

Industries:

Web3, Social Network, AdTech

Tech Stack:

Flutter, Node.js, Next.js (SSR), Vue.js/Nuxt, Svelte/Svelte Kit, Rust (Substrate), AWS, Vercel, Kotlin, Swift, NativeScript, C/C++, Solidity, Solana, Polkadot (including parachains), PixiJS for immersive UI

Mobile Core Engineer / Architect, Chiliz

Gzira, Malta

Nov 2019 — Nov 2022

This company operates at the intersection of blockchain and sports, building a gamified fan engagement platform with real time rewards, NFT integrations, and immersive mobile/web experiences. The product spans mobile apps, a marketing website, and a robust back office for team operations, all powered by onchain and offchain infrastructure.

Although my official title was Mobile Core Engineer, my practical scope expanded into architecture, technical leadership, and key engineering decision-making. I provided architecture direction, implementation standards, delivery alignment, and core platform decisions across 7 product squads and 30+ engineers.

Scope included: Architecture, Tech Lead, and Core Platform Direction

Key Contributions:

- Joined as a Mobile and Frontend Engineer, quickly expanding into Tech Lead and Architecture roles due to early stage startup needs and team dynamics.
- Built the V2 Core Architecture ("Epics Rx") from scratch, implementing routing, Sentry integration, app lifecycle handling (e.g., back press), and RxJS based state orchestration.
- Architected the new V2 App foundation, introducing structure, modularization, and maintainability across mobile and web platforms in close collaboration with Tech Leads.
- Inherited a critically unstable app, rapidly diagnosed root issues, and delivered fixes that restored reliability and performance.
- Played a central architecture and technical leadership role across 7 product squads / 30+ engineers, supporting key technical decisions, implementation standards, delivery alignment, architectural direction, and collaboration between Product Owners, Designers, Frontend Engineers, Backend Engineers, and QA.
- Delivered new features and resolved bugs across the mobile app, marketing website, and back office, covering the full product stack.
- Led implementation of performance critical mobile modules using native C/C++, Java, Kotlin, enhancing speed and responsiveness significantly.
- Maximized performance and bundle efficiency using Lighthouse audits, lazy loading strategies, and optimized module resolution.
- Introduced Test Driven Development (TDD) processes, resulting in 95%+ test coverage on frontend/mobile codebases.
- Mentored junior and midlevel engineers, fostering growth across frontend and mobile teams.
- Refactored critical legacy code, eliminating redundancy and enforcing SOLID principles, atomic design, and separation of concerns.
- Served as a key technical liaison for the CPO and stakeholders, managing feature scoping, technical estimations, and delivery pipelines.
- Provided architectural consultancy for both product scalability and developer workflows, including tooling recommendations for engineers, marketing, and PMs.
- Contributed to the monorepo strategy and shared modules for better code reuse between mobile/web.

- Built internal component libraries and unified design system across platforms.
- Led developer onboarding and documented architectural patterns for scaling team growth.
- Delivered POCs and production-grade on-chain integrations for the mobile app using React Native.
- Made and supported key architecture decisions for the V2 mobile app foundation, core modules, shared patterns, state orchestration, routing, error handling, and maintainability.
- Aligned engineers, product owners, designers, and QA around implementation direction, delivery priorities, technical tradeoffs, and release quality.
- Provided architecture guidance beyond mobile, contributing to web, back office, shared modules, developer workflows, and cross-platform consistency.
- Supported migration from unstable legacy app structures into a more maintainable V2 architecture with clearer ownership, testing, modularization, and performance practices.

Industries:

Web3, Sports & Entertainment, AdTech

Tech Stack:

NativeScript, Vue.js, Webpack, RxJS, Redux Observables, React, React Native, Jest, Ionic, Flutter, Java/Kotlin, Swift, C/C++, Solidity

Software Engineer / Technical Lead for Client Projects, KPMG

Pieta, Malta

Feb 2019 — Sept 2019

KPMG Software Solutions is the technology arm of KPMG, focused on delivering scalable, secure, and industry-compliant software systems for enterprise and client-facing environments. Projects spanned brownfield migrations, greenfield builds, enterprise platforms, industry-specific tooling, Web3, iGaming, finance, and game publishing.

Although my official title was Software Engineer, my practical scope often extended into architecture, technical leadership, migration strategy, onsite client delivery, and coordination across engineers, designers, product owners, QA, DevOps, and client stakeholders.

Scope included: Architecture, Migration, Client Delivery, and Team Coordination

Key Contributions:

- Contributed to and led architecture decisions across multiple brownfield migrations and greenfield projects for KPMG clients across finance, iGaming, Web3, game publishing, and enterprise software.
- Developed and delivered full stack features across frontend, backend, and core software, taking ownership from requirements and architecture through implementation, testing, deployment, and client delivery.
- Worked with multiple industries daily, often adapting rapidly to sector specific constraints and requirements.
- Performed onsite development, technical presentations, and stakeholder collaboration, aligning client requirements, product goals, design direction, engineering feasibility, and infrastructure constraints.
- Handled key architecture and technical decisions for multiple client projects, including:
 - brownfield migration and modernization initiatives,
 - greenfield systems from early planning to delivery,

- early-stage Web3 initiatives prior to mainstream adoption,
- iGaming platforms requiring compliance, scalability, and real-time performance,
- game publishing tools for content delivery, user management, and interactive experiences.
- Delivered end-to-end systems from 0 to 1, defining project scope, architecture, implementation plans, technical standards, and delivery milestones together with clients, designers, product owners, and engineering teams.
- Integrated new features and resolved critical bugs based on client feedback and evolving project goals.
- Managed and coordinated multiple engineers to achieve project goals, including task breakdown, implementation guidance, code reviews, mentoring, technical evaluations, and delivery alignment.
- Introduced coding standards, architecture documentation, and delivery guidelines for client projects, improving onboarding, consistency, maintainability, and long-term project handover.
- Delivered PIXIJS based immersive interfaces for clients in game publishing and iGaming and interactive media.
- Worked closely with client QA and DevOps teams to ensure CI/CD readiness across projects.
- Migrated and modernized multiple brownfield client projects, improving maintainability, scalability, performance, and delivery quality.
- Helped define greenfield project foundations, including architecture, stack choices, technical standards, development workflows, and delivery planning.
- Handled key technical decisions for KPMG clients, balancing business needs, product requirements, engineering complexity, UX direction, and delivery timelines.
- Collaborated closely with designers and product owners to translate product goals, user flows, and design requirements into practical technical solutions.
- Presented technical direction onsite when required, supporting client alignment, delivery confidence, and stakeholder decision-making.
- Coordinated engineers across multiple client projects to ensure delivery goals were met without sacrificing code quality, maintainability, or scalability.

Industries:

PharmaTech, iGaming, Fintech, E-Commerce

Tech Stack:

PHP (Laravel), Vue.js, PIXIJS, Native Canvas, Angular, React, C# (ASP.NET), C/C++

Frontend Game Engineer, AuthenticGaming

Sliema, Malta

Jul 2017 — Jan 2019

Authentic Gaming was a live casino technology provider in the iGaming industry, delivering premium streaming and immersive gaming experiences to operators worldwide.

Scope included: Mobile Application Delivery, Game UI, Real-Time Systems, and Frontend Modernization

Key Contributions:

- Went beyond the role of a Frontend Engineer, actively contributing to real time backend logic using Node.js and WebSockets to support live game data and streaming interactions.
- Developed internal operator tools that streamlined and automated the onboarding and integration of new casino operators, reducing manual effort and scaling client support.

- Contributed to the design and development of a new architecture, improving code maintainability and scalability across the frontend stack.
- Built and presented a POC Bet Table using PIXI.js, showcasing an interactive, canvas based experience to the broader engineering team and the CTO contributing to future product planning.
- Shipped features and enhancements across the core game application, marketing website, and back office tools, addressing both user facing needs and internal operations.
- Resolved bugs and technical debt across systems, improving platform stability and game reliability.
- Refactored legacy Backbone code into modular Redux based flows to modernize the frontend
- Provided technical input for WebSocket based scalability and client side state synchronization.
- Collaborated closely with QA and game designers to ensure UX alignment and feature quality.
- Implemented game performance profiling tools to detect bottlenecks in canvas rendering.
- Played a crucial role in the development of game UI for desktop and mobile experiences, supporting live casino product delivery.
- Implemented the new AG mobile application while learning and applying new frontend and mobile technologies.
- Took ownership of multiple projects, balancing business requirements, technical team needs, and delivery quality.
- Worked closely with managers, CTO-level stakeholders, QA, and designers to deliver product-facing casino game experiences.
- Contributed to modernization and migration from legacy frontend patterns into more maintainable Redux / RxJS-based flows, improving scalability and developer experience.

Industries:

iGaming

Tech Stack:

React, Redux, Redux Observables, RxJS, Backbone.js, HTML5 Canvas, PIXI.js, Node.js (WebSockets)

Founder, CEO & CTO, Gods of Zushin

Cospicua, Malta

Apr 2015 — Present

Gods of Zushin is a long-standing indie MMORPG project combining immersive gameplay with custom-engineered server and client architecture.. Initiated as a passion project during academic studies, the game has evolved over five years into a sophisticated platform built entirely in house, encompassing game design, backend systems, and live operations.

Key Contributions & Achievements:

- Led the project end to end for over five years, overseeing game design, development, infrastructure, and operations, an enduring accomplishment in the indie gaming space.
- Managed and coordinated cross-functional contributors across development, game design, community management, marketing, operations, and monetization, taking ownership of product direction, technical delivery, player engagement, and long-term roadmap decisions.
- Led long-term product and technical decision-making across engineering, infrastructure, gameplay systems, monetization, community operations, marketing, and release planning.

- Designed and built a custom high performance game engine, capable of handling large-scale queries and low-latency multiplayer interactions still in active use today.
- Developed custom cryptographic and data compression solutions, improving security and performance in client server communication.
- Architected scalable client and server infrastructure, focusing on optimization, modularity, and minimal latency across game sessions.
- Implemented integrated payment systems, including Stripe and PayPal, enabling monetization through ingame purchases and subscriptions.
- Executed marketing strategies across multiple platforms on Facebook, YouTube, Twitch, Reddit, Instagram, and others to grow the community and drive engagement.
- Produced ingame 2D/3D assets, including modeling in Autodesk Maya and texture design in Adobe Illustrator, supporting full in house game asset creation.
- Maintained platform operations using services like Cloudflare, Google Cloud, and DigitalOcean, ensuring uptime and global accessibility.
- Built internal tools for game moderation, analytics dashboards, and live patching systems.
- Designed ingame economy and balancing systems based on player behavior and feedback.
- Implemented account and inventory systems using custom encryption and anti tamper techniques.
- Fostered a player driven community with thousands of hours of cumulative engagement.

Industries:

Game Publishing, Social Network

Tech Stack:

C/C++, C#, Lua, Python, Node.js, PHP (Laravel), Vue.js, Stripe, PayPal, DigitalOcean, Cloudflare, Maya, Illustrator

RECOMMENDATION LETTERS

AuthenticGaming

Sliema, Malta

Recommendation letters from the CTO and Head of Frontend highlight my role in desktop/mobile game UI development, mobile application delivery, ability to handle multiple projects, and alignment with business and technical requirements.

KPMG

Pieta, Malta

Recommendation letter confirming my role as Software Developer within the Software Development Department, with strong attendance, timekeeping, and professional delivery standards.

reNFT

Remote, United States

Recommendation letter from the Lead Frontend Developer highlighting my work ethic, team collaboration, product awareness, technical decision-making, and strong knowledge across software, systems, and architecture beyond frontend work.

PROJECTS

Portfolio / Case Studies

Nov 2022 — Nov 2022

Dive into my interactive portfolio to see how I approach software architecture, product thinking, design systems, state management, performance optimization, and modern frontend / full stack engineering. It showcases not only what I've built, but also how I think through architecture, product delivery, technical tradeoffs, and user experience.

The portfolio also highlights selected projects, achievements, technical services, engineering leadership, consultancy experience, and hands-on work across startups, Web3, gaming, enterprise, and product-led environments.

Interested in collaborating or hiring? Don't hesitate to reach out!

Tech Stack:

Next.js, React, Styled Components, Tailwind CSS, FontAwesome, Recoil

Performance Insights:

For performance audits and optimizations, please refer to the Lighthouse analysis summaries located in the `analyze/*.pdf` directory.

<https://redgame.dev>

Gods of Zushin | MMORPG

Apr 2017 — Present

A long term achievement and deeply personal project, Gods of Zushin represents my passion for game development, systems architecture, and player driven experiences. I continue to work on meaningful updates during weekends, expanding my knowledge across performance optimization, networking, and gameplay systems.

For a deeper dive into the project, including my roles as CEO, CTO, and Architect, please refer to the Work Experience section.

<https://goz.fun>

GOZ Chapters

After releasing the first two chapters of the project, I began refining my marketing and user acquisition strategies. This led to the creation of a dedicated landing page to build hype and collect interest for the upcoming chapter pre release.

The page focused on conversion driven design, using clear messaging, visuals, and calls to action to engage the community and new players.

Tech Stack:

React.js

AMW - Social Network & Game

Aug 2015 — Aug 2019

AMW - Game & Entertainment (AMW = Anime Mixed World) was a pioneering online platform that seamlessly blended social networking with gamified experiences, catering to enthusiasts of anime, manga, cosplay, and gaming. Originally launched in the early 2010s and completely rebuilt in 2015, AMW emerged as a vibrant community hub offering a unique fusion of interactive features and user-generated content.

Platform Overview

AMW functioned as a comprehensive social network, reminiscent of platforms like Facebook and Google+, but tailored specifically for the anime and gaming communities. Key features included:

- **User Profiles & Social Interaction:** Members could create detailed profiles, connect with others, and engage in discussions across various forums and chat rooms.
- **Content Creation & Sharing:** Users had the ability to publish their own creations, including artwork, fan fiction, and cosplay photos, fostering a rich environment of creativity and collaboration.
- **Gamified Experience:** The platform incorporated a unique point based system where users earned rewards through interactions, which could be used to customize and enhance their avatars and profiles.
- **Marketplace & Auction System:** An integrated auction feature allowed users to trade virtual items, while an ad system, similar to Facebook's, enabled targeted promotions within the community.
- **RPG-Style Character Development:** Members could develop RPG style characters, leveling up and acquiring enhancements, adding a game like dimension to the social experience.

Technical Architecture

The development of AMW showcased a robust and versatile tech stack:

- **Frontend:** Utilized HTML, JavaScript, and WebGL/Canvas for dynamic and interactive user interfaces.
- **Backend:** Built on PHP and Python, ensuring scalable and efficient server side operations.
- **Game Engine:** Incorporated custom built engines using C++ and Lua, facilitating real time interactions and complex game mechanics.
- **Security & Performance:** Implemented custom cryptography and data compression techniques to ensure secure and fast data transmission.

Impact and Legacy

Although AMW was eventually discontinued, its innovative approach left a lasting impact:

- **Community Building:** Successfully cultivated a large, engaged community passionate about anime and gaming culture, while managing product direction, community operations, technical delivery, marketing, and platform evolution.
- **Technical Innovation:** Pushed the boundaries of web development by integrating gaming elements into a social networking platform.
- **Managed and coordinated contributors** across development, content, community, and operations, contributing to broader cross-functional leadership experience across product, engineering, and community-led platforms.

- Personal Growth: Provided invaluable experience in fullstack development, community management, and digital marketing strategies

Others

Remote

Beyond the highlighted work, I've contributed to numerous other projects over the years, ranging from fullstack systems and Web3 integrations to open source utilities and experimental prototypes.

I'm committed to continuous learning and consistently work on side projects to stay up to date with evolving technologies. This not only enhances my personal skillset but also brings real value to the companies and teams I collaborate with.

EDUCATION

Bachelor of Science (Honours) in Multimedia Software Development, MCAST

Mosta, Malta

Sept 2015 — Jun 2017

Although I didn't complete the last year, I was able to learn a lot about various intriguing subjects such as C#, Blender, Game Development, Photoshop, Web Development, PHP, Maltese, English, Mathematics, and 2D Animation with After Effects.

Extended Diploma Computer Software Engineering, MCAST

Mosta, Malta

Sept 2013 — Jun 2015

I studied a variety of interesting subjects, including:

C#, Blender, Photoshop, Web Development, PHP, Maltese, English, Mathematics, and 2D Animation with After Effects.

Diploma Computer Software Engineering, MCAST

Poala, Malta

Sept 2011 — Jun 2013

I studied a variety of interesting subjects, including:

C#, Blender, Photoshop, Web Development, PHP, Maltese, English, Maths, 2D Animation with After Effects

Foundation in Computing, MCAST

Mosta, Malta

Sept 2010 — Jun 2011

I studied a variety of interesting subjects, including:

C#, Computer Systems, Web Development, Maltese, English, Maths

Foundation in Agriculture, MCAST

Qormi, Malta

Sept 2009 — Jun 2010

This was a distinct experience compared to my usual role, and I was able to learn about a variety of subjects, including farming and understanding the anatomy of animal organs, among other topics.
